

VIGNESH M

Junior Software Developer | Backend Developer

PERSONAL PROFILE

I am Vignesh, a passionate junior software developer interested in backend development, API development, databases, and AI-powered applications. This sample document is designed as a test PDF for document upload, text extraction, chunking, embedding, and vector database indexing.

PROFILE HIGHLIGHTS

- Interested in building practical backend applications.
- Comfortable working with JavaScript, TypeScript, Node.js, and Express.
- Learning RAG, embeddings, Qdrant, LLM integration, and knowledge graphs.
- Focused on writing clean, maintainable, production-oriented backend code.

EDUCATION

Bachelor of Science – Mathematics

A.V.V.M. Sri Pushpam College, Bharathidasan University

2020 – 2024 | CGPA: 6.84

Higher Secondary Education

S.I. (B.M.S) Higher Secondary School

2018 – 2020

Secondary School Education

St. Antony's High School, Pasupathikovil

2017 – 2018

TECHNICAL TRAINING

Java Full Stack Development – Payilagam Institute, Velachery

Training period: June 2024 – December 2024. The training covered Java, Spring Boot, PostgreSQL, HTML, CSS, and JavaScript, with practical backend and web-development exercises.

TECHNICAL SKILLS & EXPERIENCE

Backend Technologies

Node.js, TypeScript, Express.js, Java, Spring Boot, REST APIs

Databases

PostgreSQL, MySQL, TypeORM, Redis

AI / RAG Technologies

LLM integration, Gemini API, embeddings, Qdrant vector database, chunking, retrieval-augmented generation

INTERNSHIP EXPERIENCE

Android Developer Intern – Netaxis IT Pvt Ltd

June 2025 – October 2025

Worked with Android development technologies including Java/Kotlin, Room Database, and XML-based UI development. The internship provided practical exposure to application development and data persistence.

CURRENT DEVELOPMENT PROJECT

Ragfish – File-Based RAG Chat Application

Ragfish is a backend-focused application designed to upload documents, extract their text, split the text into chunks, generate embeddings, store vectors in Qdrant, and use retrieved context with an LLM to answer user questions.

RAGFISH PROJECT – SAMPLE KNOWLEDGE

Document Processing Flow

1. User uploads a PDF or DOCX document.
2. The application stores resource information in PostgreSQL.
3. A background job processes the uploaded resource.
4. Text is extracted from the document.
5. The extracted text is divided into overlapping chunks.
6. Each chunk is converted into an embedding vector.
7. The vector and metadata are stored in Qdrant.
8. During chat, the user's question is embedded and relevant chunks are retrieved.
9. Retrieved context is provided to the LLM to generate an answer.

SAMPLE FACTS FOR RAG TESTING

Field	Sample Value
Name	Vignesh M
Primary Interest	Backend Development
Main Project	Ragfish
Vector Database	Qdrant
Relational Database	PostgreSQL
LLM Integration	Gemini
Runtime	Node.js

This four-page document can be used as a sample ingestion file for testing PDF extraction, chunk creation, embeddings, Qdrant upsert, retrieval, and RAG responses.
